

Should Your Company Implement an ERP System?

*Integrated Data.
Informed Decision .*

Did you know that a substantial percentage of the world's transactions involve the use of an ERP (Enterprise Resource Planning) system?

For this reason alone, an ERP system plays a significant role in today's business world, making the ERP market powerful and meaningful.

Today, more businesses than ever are appreciating the benefits of having a comprehensive ERP tool that integrates operational and financial functionality into a single platform.

Businesses face many challenges on a regular basis, and these challenges are not new – increasing efficiency of their operations, improving the quality of their products and services, and serving their customers better. What does continue to change is the capability of tools and systems to assist companies in meeting these challenges.

An ERP system is all about bringing value to your business.

Therefore, an ERP system should be treated as a major investment in your business, and not just as another technical project.

Yes, an ERP system does rely on technology in that it integrates business data; however, this business data enhances a business by providing it with the ability to improve upon the way it plans and forecasts, along with enabling collaboration.

A core principle of an ERP system is that it revolves around data that sits in a central database, which in turn enables information to be maximized

to its **full potential**, and eliminates the need to continuously enter the same data into various systems.

With an ERP, you are simply automating your business operations according to pre-defined rules.

In return, you can get a better vision and understanding of the overall effectiveness and efficiency of your business, including your equipment, processes, productivity, and performance.

This enables your company's ability to grow, run more cohesively, and experience substantial benefits from tracking capabilities that are available in an ERP system, allowing your business to measure success.

Any business considering implementing an ERP system should have specific objectives and goals in mind. These objectives and goals will usually relate to the specific business problems that the business plans to resolve with an ERP.

For example, a company may be interested in:

- Transforming part or all of its business to improve efficiency and other related goals
- Increasing visibility and transparency in its operations and finances
- Improving collaboration and sharing of information across various parts of the company

By implementing an ERP system that meets your objectives and goals, you will be **bringing value to your business**. Not only will you be able to enhance existing client satisfaction, but you will be able to attract new clients as well.

MIE Trak Pro can bring value to your business.

How? By streamlining all of your sales, manufacturing, engineering, and accounting operations for maximum efficiency, accuracy, and control – all in real time from a central location.

MIE Trak Pro is a complete and innovative ERP software solution that enables businesses to make informed decisions for centralizing their business processes, resulting in maximum efficiency and immediate ROI.

***mie* TRAK PRO**

Powerful...

The powerful tracking capabilities in **MIE Trak Pro** enables businesses to view the status of quotes, sales orders, work orders, nesting, and scheduling at any time, from a central and secure location.

Plus, its built-in process flow prevents multiple entries from having to be created – for example, work orders and purchase orders can be created based upon current inventory levels, and purchase orders can be created based on the requirements for a work order.

The Quick View feature allows an unlimited number of custom reports to be created at any time based upon your needs – these reports can then be sent to other individuals through e-mail based on a pre-determined schedule.

This integration allows **MIE Trak Pro** users to easily import customer data and supplier information, and sync invoices and purchase orders as they are created and updated.

In addition, **MIE Trak Pro** users can easily create quotes and RFQs, manage sales and work orders, track inventory in multiple locations, schedule individual machines within work centers and assign them to specific employees, view real time job costing and profitability reports, and create packing slips and invoices.

Seamless...

MIE Trak Pro also has seamless integration with various accounting software products, including Quickbooks and Sage, and various payroll software applications.

This integration allows **MIE Trak Pro** users to easily import customer data and supplier information, and sync invoices and purchase orders as they are created and updated.

MIE Trak Pro can easily be customized to incorporate any manufacturing process as needed.

Contact us today for a FREE DEMO, and see how MIE Trak Pro can bring value to your business.
